Tue

Classification Model

ML

Supervised

Unsupervised

Regression

1) Predict the car

2) Predict the output

3) Predict HDD

Continuous
Label / output

Classification

1) Predict Pass / Fail

2) Day of the week

3) Predict the species of plants / animals

Discrete / Finite
Label / output

DS Project

- 1) Problem Statement
- 2) Data Extraction / collection
- 3) Data transformation / cleaning
- 4) Choose & build model
- 5) Model Evaluation
- 6) Model deployment.

7) Model Govern

- o Model monitoring
- o model hyperparameterisation
- o model versioning

MLops

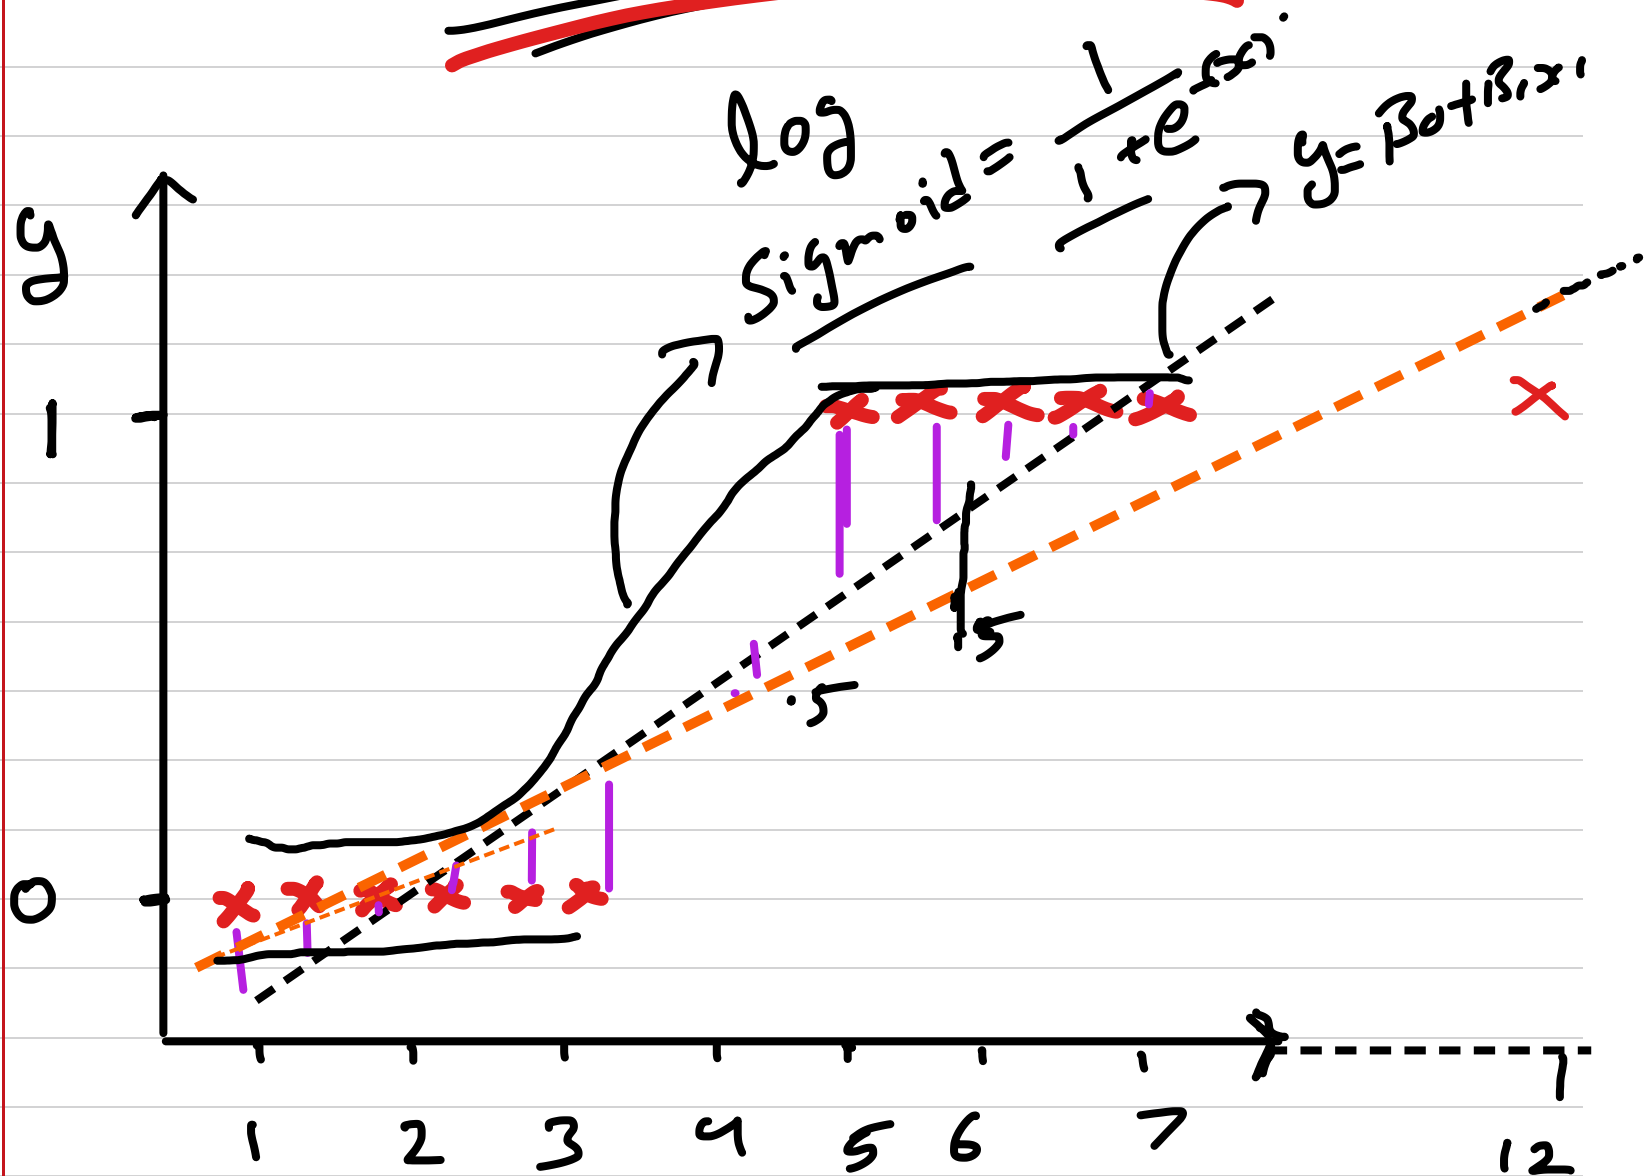

MLFlow F_{new}

o Class task

Logistic Regression

Q) Based on Studying
hours Predict

the student would
Pass or Fail

Problem

{ 0 outlier ✓
0 < 1 or > 0 ✓

$$y = \beta_0 + \beta_1 x$$

\Downarrow

$$= \frac{1}{1 + e^{-y}}$$

$$= \frac{1}{1 + e^{-(\beta_0 + \beta_1 x)}}$$

Sigmoid

$$= \frac{1}{1 + e^{-x}}$$

$$\hat{y} = \frac{1}{1 + e^{-(\beta_0 + \beta_1 x)}}$$

$$= \frac{1}{1 + e^{-y}}$$

Revision

o ML tree

o Supervised - Classification

o Problem - $Y(\text{output})$
↓
Discrete
Finite

o Model

↓
Logistic Regression
↓

↓
Sigmoid \rightarrow LR.

$$\hat{y} = \frac{1}{1 + e^{-(\beta_0 + \beta_1 x_1)}}$$

→ Build the model
→ Evaluate the model.

↳ Metrics/Parameters

o Accuracy
Score

Classification matrices

$$y = (1, 0)$$

Actual values

Predicted values

	Positive (1)	Negative (0)
Positive (1)	TP	<div>FP</div> <div>Type I</div>
Negative (0)	<div>FN</div> <div>Type II</div>	TN

Confusion matrix

Q) Based on number of hours study before exam

X	Y	\hat{Y}
5	1	1
6	1	1
3	0	1

→ FP

Example

S1

young
Pregnant
→
To a man

S2

Active lady
with 7th month
baby

young
for result
show you not
pregnant

- S1 — Testing a Patient with Covid ✓
- S2 — CC Fraud Blassing ✓ Limit to F.N
- S3 — Judge deciding whether ✓
 Someone is guilty of a crime.
Limit F.P

Accuracy Score

$$= TP + TN$$

$$\frac{TP + TN + FP + FN}{TP + TN + FP + FN}$$

$$= AC$$

100	40	
TP	FP	15
FN	TN	40
10		

Precision

$$= \frac{TP}{TP + FP} = \frac{40}{40 + 10} = \frac{4}{5} = 0.8$$

Precision is useful in the case where False Positive is a high concern than False

Negative

Ex:- Spam \rightarrow Imp Email \rightarrow Spam
Spam

Recall (Sensitivity)

$$\text{Recall} = \frac{TP}{TP + FN}$$

Useful in the case where
FN is of high concern
than FP

Ex:- Very dangerous
Good item gets
a FSC

- Pregnancy :-
- AirPort - Security
Screen.
- A Good Transaction
gets unnoticed.

F1 Score

Harmonic mean

$$F1 = 2 \times \frac{\text{Precision} \times \text{Recall}}{\text{Precision} + \text{Recall}}$$

AUC Curve [Graphical]
